Regarding this… 457 blade radius. I'm a bit confused.

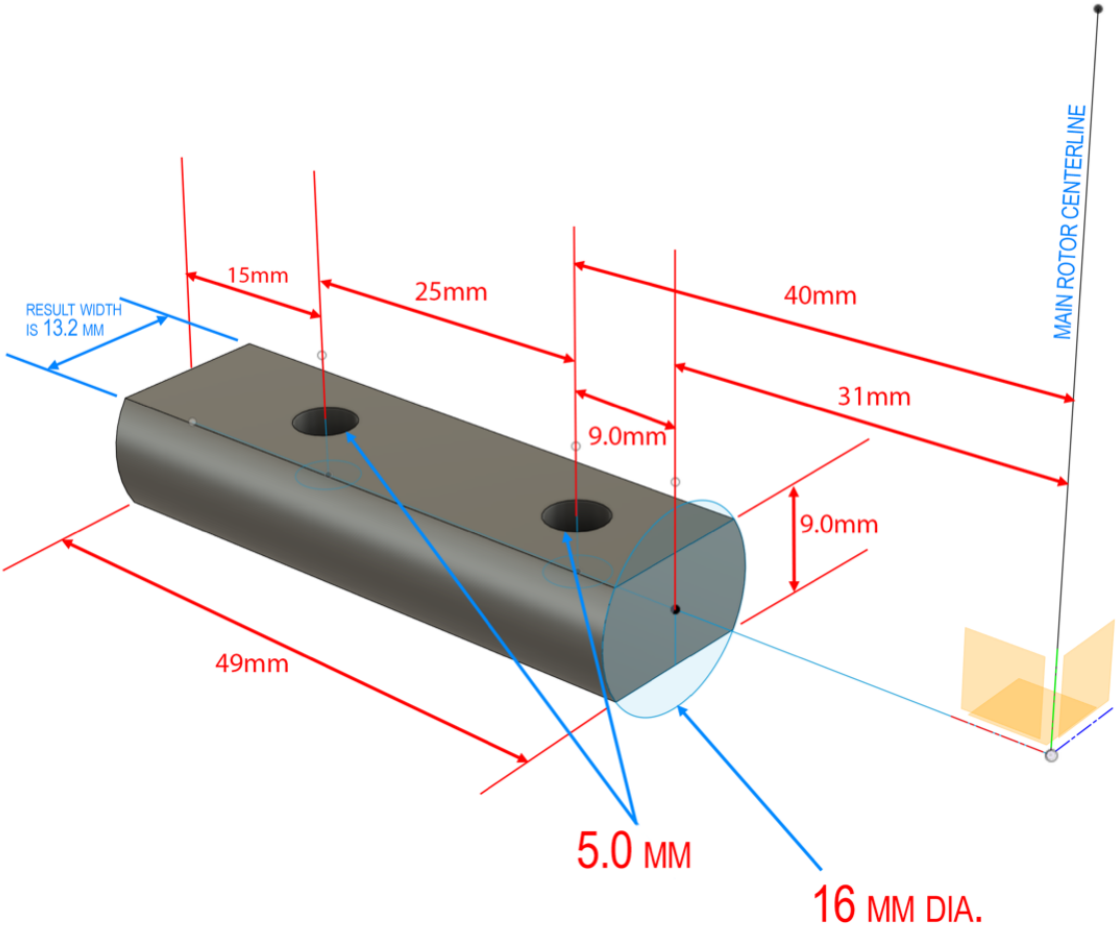

If I read the last blade STL you gave me, (attached) it's 495mm x 18.36mm x 42.6mm.

Add the 495 to the rotor head distance of 31mm to butt of blade, and you have a rotor radius of 562mm.

If it's a 'blade radius' of 457, minus the 31, it's a rotor disc radius of only 426.

Is the blade size (not blade radius) 457? If so, then add 31 to that and the true rotor disc radius is 488mm.

PROP CORE CW PCCF8 @ root 100% fill, tip 2 wall 5% fill.stl
